

The challenges post kidney transplant

with the unconditional
unrestricted grant of

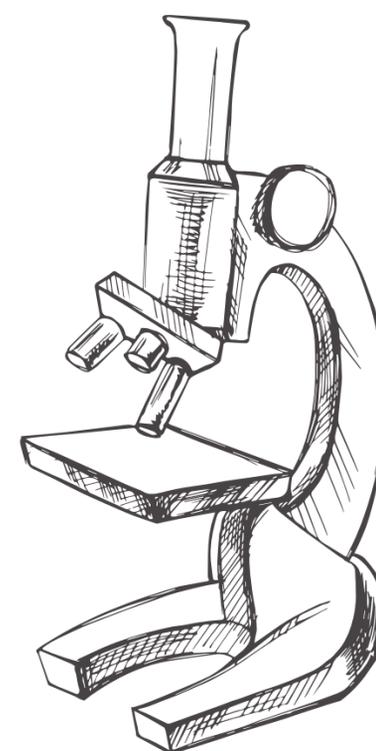

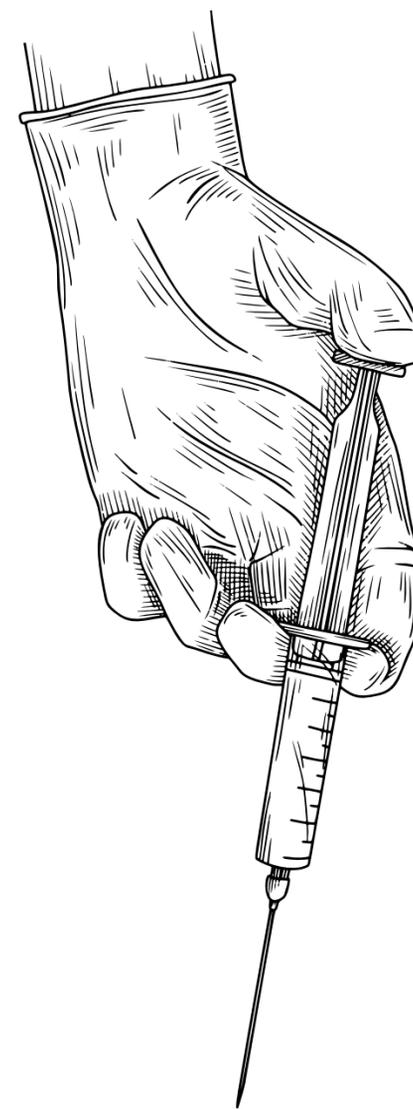

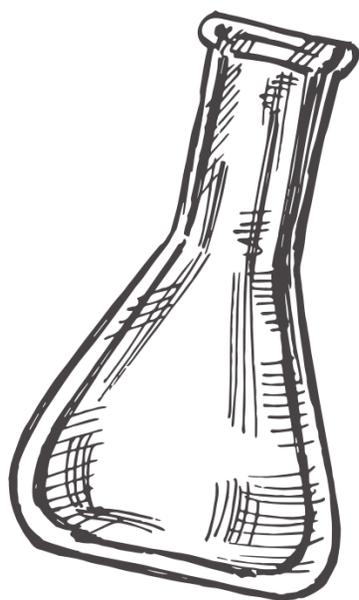

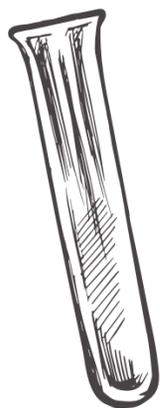

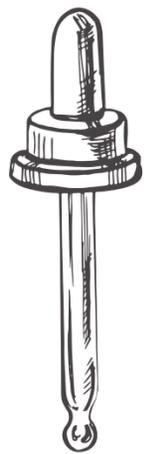

Check ups

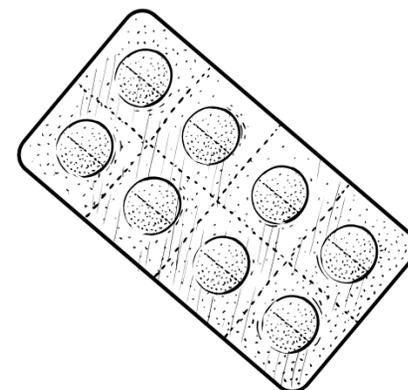

for the continuation
of the therapeutic path

Regular follow-up visits
at the transplant centre
alongside regular
blood samples,
urine tests
and diagnostic
control tests.

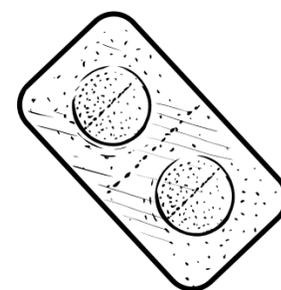

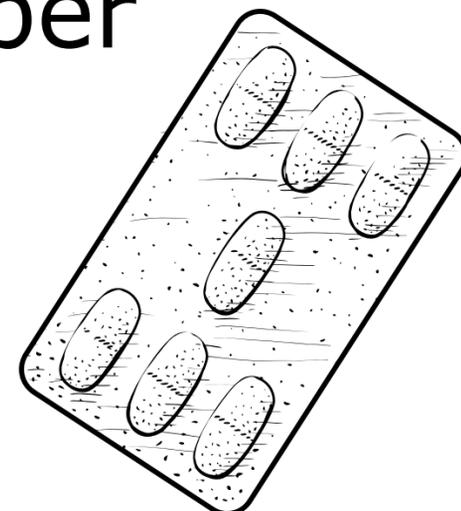

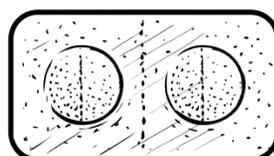

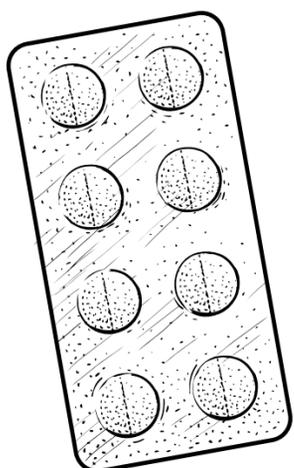

Management of medications

Patients have to learn and adopt practical measures to manage the immunosuppressive treatment which consists of different types of medications with different schedules

Dedicated apps or pill organizers can help the patient remember when to take their meds

Patients need to be careful with their lifestyle and exposure to risk factors as the use of anti-rejection medication can cause some complications:

They tend to have increased risk of:

Neurological complications

Infections

Diabetes

Cancer

Hypertension
