**Rationale and
description**

This one-day workshop organised by the European Society of Organ Transplantation (ESOT) on "Management of CMV in solid organ transplant recipients" addresses a critical aspect of post-transplant patient care. Cytomegalovirus (CMV) infection poses a substantial threat to transplant recipients, and this workshop aims to provide comprehensive education and facilitate insightful discussions among healthcare professionals. The workshop's structure revolves around a dynamic and interactive programme that encompasses talks by renowned experts and active participation from attendees, who will collectively analyse and discuss some clinical cases. This interactive segment fosters collaborative learning, enabling the sharing of real-world scenarios and diverse perspectives.
